

“Restaurant Management System”

- Student: Mohammed
- Student ID: 31750/2025
- Course: Database Programming with Oracle Database

□ Problem:

- Data loss
- Human errors
- Slow order tracking
- Difficulty managing employees and menu items

❑ Project Objectives:

- Develop a restaurant database using Oracle.
- Manage employees, menu items, and customer orders.
- Improve data accuracy and integrity.
- Automate restaurant operations.

❑ Target Users:

- Restaurant Manager
- Employees
- Cashier

❑ Benefits:

- Faster order processing.
- Secure and centralized database.
- Reduced human errors.
- Easy retrieval of restaurant information.

❑ Conclusion:

This project provides an efficient Oracle database solution for restaurant management using SQL and PL/SQL.
